Rail Services Corporation

Communications, Signals, Security and Information

RSC provides the rail industry with Communications, Signals, Security and Information **SYSTEMS**. More and more these systems are inter-connected and require greater product knowledge, experience, and a “systems approach”. RSC has the necessary years of experience, knowledge and expertise to successfully create solutions for our clients. **We provide:**

- **Systems Integration**
- **Project Management**
- **System Design**
- **Communications Services and Products**
- **Exclusive Representative in RR industry**
- **Software Licensing**

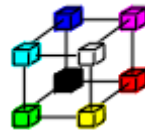

RSC was formed in 1997 by the principles of experienced rail-supply firms. Our  original offerings were software and hardware Signal products. But, as Signal Systems became interconnected with Communications and Security Systems, we are able to leverage our knowledge and experience to integrate our products with a variety of other products.

Systems Integration and  Project Management has become our most important business to compliment our widely recognized product lines. RSC provides the glue to tie together all your railroad systems.

The decision to Buy or Build is made in the best interest of the client. We have the experience to assure this process is not driven by product providers.

Our expertise is often sought out developed products and names in the Rail Supply business. We groups and projects for them.

by manufacturers. We have licensed software to the biggest have also managed development
